

Personal Timetable

Over the past two weeks, most of my time has been divided between personal responsibilities, rest, social activities and the CariSurg 2026 MedTech Pathways Program. My summer schedule is really flexible, i am mainly committed to the internship while having a few family/social engagements before university classes resume.

Main Time Commitments

- **Sleep:** approximately 7-8 hours daily
- **Internship/Program Work:** planned 3-5 hours daily
- **Personal/Family Responsibilities:** errands, household tasks
- **Social & Leisure Time:** evenings and weekends
- **Study & Skill Development:** independent learning and program preparation

[illegible]

Planned Program Hours

- Monday–Thursday: 5 hours/day
- Friday–Sunday: 3 hours/day

Total planned program time: 28 hours weekly

I adapted the ABCDE priority framework commonly used in healthcare and triage settings to organize my weekly workload.

Application of the ABCDE Framework

- **A Tasks - Critical and urgent**
 - Deadlines, major submissions, meetings, program deliverables
- **B Tasks - Important but less urgent**
 - Revision, reading, networking
- **C Tasks - Useful but optional**
 - Extra tutorials, social activities, non-essential meetings
- **D Tasks - Delegate**
 - Shared responsibilities or tasks that can be simplified
- **E Tasks - Eliminate**
 - Excessive scrolling, procrastination, unnecessary distractions

This framework supports quick prioritization similar to clinical decision making environments where urgent matters must be identified efficiently.

I also plan to use the Pomodoro Technique during study blocks:

25 minutes of focused work

5-minute break

Longer break after four cycles

This schedule was designed to balance productivity, wellbeing, and consistency throughout the 12 weeks. The work blocks ensure that at least 3-5 hours are dedicated to program per day.

Morning hours are reserved for focused work because they are usually my most productive period. Breaks are intentionally included to reduce burnout and maintain concentration. Weekends contain lighter hours to maintain momentum while still allowing time for rest and personal responsibilities.

Using structured prioritization methods such as the ABCDE framework and Pomodoro technique will help improve task management, reduce procrastination, and support efficient completion of assignments and internship responsibilities.
